

C5

Project Site Circulation

The site benefits from exceptional transit access. The 34th Street–Hudson Yards station on the 7 subway line provides direct underground connection to the development. Penn Station, located several blocks east, offers connections to NJ Transit, LIRR, Amtrak, and multiple subway lines. Vehicular access is primarily from 10th and 11th Avenues, with 11th Avenue connecting to the West Side Highway. Pedestrian circulation is anchored by the High Line, which provides an elevated, car-free walking route from Gansevoort Street through the district to 34th Street. The building's extended base and waterfront adjacency create a continuous pedestrian approach from multiple directions, the High Line, the river edge, and the surrounding street network. The ramped ground plane of the project draws visitors into the structure as a continuous landscape movement rather than a conventional door threshold.

Key infrastructures

- 7 train: 34th St–Hudson Yards station, direct underground access to site
- Penn Station (4 blocks E): NJ Transit, LIRR, Amtrak, A/C/E, 1/2/3 subway lines
- Vehicular access via 10th and 11th Aves; 11th Ave connects to West Side Highway
- High Line: elevated car-free pedestrian route through the district
- Extended building base creates continuous ramped approach from waterfront and street
