Climate Data

New York City climate data (Central Park station, representative for Midtown) indicates the following annual conditions. Average annual temperature is approximately 55°F (13°C). The warmest month is July with an average high of 84°F (29°C) and low of 70°F (21°C). The coldest month is January with an average high of 38°F (3°C) and low of 26°F (-3°C). Heating degree days (base 65°F) total approximately 4,800 HDD; cooling degree days total approximately 1,100 CDD. Annual precipitation is 49.9 inches with snowfall averaging 25.1 inches. Relative humidity ranges from 55% in spring to 70% in summer. Prevailing winds are from the northwest in winter at 10–15 mph and from the south-southwest in summer at 8–12 mph. The area receives approximately 2,535 hours of sunshine annually. These conditions place the project in a heating-dominated climate with significant cooling loads during summer months.

Key Considerations

- Avg annual temp: 55°F (13°C); July high 84°F, January low 26°F (-3°C)
- HDD (base 65°F): ~4,800; CDD: ~1,100 — heating-dominated with summer cooling loads
- Precipitation: 49.9 in/yr; snowfall: 25.1 in/yr; relative humidity 55–70%
- Wind: NW in winter (10–15 mph), SSW in summer (8–12 mph)
- Sunshine: ~2,535 hrs/yr; peak solar radiation June, minimum December

Date December 21
Time interval 00:00 - 24:00
